

# Lecture #15

*Nicholas J. Gotelli*

*April 5, 2016*

## Analyzing regression data

- form of function  $y = a + bx$
- simulate  $x$  variable
- set up parameters
- adjust and replicate from the sd of random noise

## Analyzing logistic regression

- fit of model
- simple plot using predict function

## Analyzing contingency table

- table function for data
- chi square analysis
- mosaic plot for visualization
